Technical Services

Maxi and Mini ISM

The Dominion Marine Technical Services' Mini and Maxi ISM systems have been tailor-made, using a wealth of knowledge and experience, to meet the safety management requirements as established in the "Large Yacht Code" for all British registered commercial yachts greater than 24 metres and less than 500 gross registered tonnes.

Maxi ISM

This system has been designed specifically for large commercial vessels less than 500 gross registered tonnes that do not require Full ISM. It provides owners with a safety management system that is more comprehensive than a conventional Mini ISM solution.

The establishment process will involve an assessment visit, the creation of vessel specific manuals and procedures, the initiation of onshore DPA services, a system of implementation and crew familiarisation visit and a subsequent tailoring visit to ensure that the system is meeting its objectives with maximum efficiency.

Mini ISM

The Mini ISM framework clearly defines practical and effective lines of communication both onboard and ship to shore. The system is owned and managed by the yacht and will evolve with the vessel whilst being fully supported by a team of qualified Lead ISM auditors.

To ensure that Mini ISM systems continue to operate effectively and develop on a timely basis, Dominion Marine Technical Services will continually provide clients with details of all relevant legislative changes and will also perform non-compulsory bi-annual onboard audits.

This Mini ISM framework is extremely comprehensive and practical to implement, whilst also offering outstanding value for money.

For further information about both systems offered by DMTS please contact John Wade on +44 (0)1624 682400 or info@i.im.
